

# API R Code example : Authentification

```
# Load required libraries
library(httr)
library(jsonlite)

# Function to login to API and get token
connect <- function(email, pwd, env) {
  # email: email used to connect to your dnnext environment
  # pwd: password
  # env: name of your environment, first part in your dnnext URL before the dot
  # Example: ENV.dnnext.io -> env = 'ENV'

  # Construct the URL
  url <- paste0("https://api.dnnext.io/v1.0/auth/custom-login?org=", env)

  # Create the payload
  payload <- toJSON(list(
    email = email,
    password = pwd,
    organization = env
  ), auto_unbox = TRUE)

  # Set the headers
  headers <- add_headers('Content-Type' = 'application/json')

  # Send the POST request
  response <- POST(url, headers, body = payload)

  # Parse the response and extract the token
  token <- content(response)$token
  return(token)
}

# Call the connect function with your credentials
token <- connect("<email>", "<password>", "<env>")
token
```
